Experience

Instagram – Meta, iOS Staff Software Engineer – New York City, NY

June 2023 – present

- Unlocked \$1B in annual headroom by building & launching [Instagram for iPad](#) as a core engineer in a team of 6. Implemented Profile; 4-to-3 Explore Grid; Windowed Keyboard Observation; Welcome Experience; Testing Framework.
- Tech-leading a team of 4 staff iOS engineers continuing iPad development and driving the next phase of the iPad experience.
- Tech-led multiple Profile features (Expanded Profile Picture, Notes, [Highlights in Grid & Tall Grid](#)) reaching hundreds of millions of daily users, driving engagement and simplifying UI.
- Recovered ~\$600k in annual compute as Instagram dead code cleanup champion — automated deadness detection and AST/AI codemods reduced stale branches by 90% YoY.
- Core contributor to internal iOS compile-free cross-language (ObjC/Swift) AST analysis tool enabling realtime contextual linting for agentic coding; currently rolling out to 100% of iOS agentic sessions.
- Defined UIKit Best Practices for Instagram, now part of the new-hire iOS training path. [QuickLayout](#) maintainer, driving adoption and reducing layout debt across the iOS org.

Instagram, Meta & AFFOA, SWE Intern

- Instagram Subscriptions (Android) – AI recommendations pipeline for subscription growth
- Meta Daiquery Notebooks (Web) – New cell/query type for local data-manipulation in internal Jupyter Notebook mirror
- AFFOA (iOS) – Swift+SceneKit to render AR models based off of spatial mapping and recognized patterns

Projects

Tower & Groov — Mobile Apps

- Developed [Tower](#), a rock-climbing social media with route-management for setters. Published to the App Store and serviced several dozen setters and climbers for a year. [Demo](#)
- Managed a team of 7 to develop [Groov](#), a music creation social media platform.

C++ Raytracer & Acceleration Structures

A simple raytracer written in C++, exploring BVH and SAH acceleration structures – [Demo](#), [GitHub](#)

C++ Thread-Safe, Lock-Free HashMap

Wait-free parallel hashmap implemented in C++ – [Paper](#), [Demo](#), [GitHub](#)

Skills

Mobile/iOS: Swift, SwiftUI, UIKit, IGListKit, ObjC/C++

Systems & Backend: Python, PHP/Hack

Education

BS **University of Central Florida**, Computer Science – Orlando, FL

Sept 2019 – June 2023

Varsity Competitive Programming Team, placed third in ICPC Regionals
